ABSTRACT

A survey of public elementary and secondary school environmental programs and project curricula was conducted by the University of Tennessee at Knoxville. From the information received, this directory was compiled, the purpose being to facilitate the establishment of a national communication and information delivery system among operational programs and projects. The sources are presented in two sections. One contains those programs and projects responding to the survey instrument in the research study. The second section treats programs and projects which did not respond to the survey. Arranged alphabetically by state, each entry provides the director/co-director, program or project, and the address. Appended materials are also presented in two sections. The first contains an alphabetical listing of state education agency coordinators for environmental education, who identified their public school programs and projects applicable to the study population. Only one state agency representative did not respond to the survey. The second appendix is a listing of organizations, agencies, and persons known to be working in the field of environmental education, from which applicable study programs/projects were requested. More than two thirds of those contacted provided responses. (BP)

INTRODUCTION

During the 1974-75 academic year, the Science and Environmental Education Area in the Department of Curriculum and Instruction at The University of Tennessee, Knoxville, Tennessee, conducted a nation-wide survey analysis of public elementary and secondary school environmental education program and project curricula. The central focus of this research effort was directed at identifying and describing selected curricular characteristics of such programs and projects, and analyzing these characteristics as they related to specified criterion variables. (A report summarizing the study findings is in preparation and will be available for general dissemination.)

A fundamental component of the total research effort was the identification of those programs and projects, and their directors/coordinators, which were to constitute the study population. The final study population, consisting of 536 program and project directors/coordinators, was established using the following procedures:

1. A direct-mail survey was conducted of all state education agency coordinators for environmental education. These individuals were requested to identify those public school environmental education programs and projects within their respective states which were applicable as members of the study population. Only one state agency representative did not respond to this survey request. (See Appendix I.)

2. The ERIC Information Analysis Center for Science, Mathematics, and Environmental Education publication, A Directory of Projects and Programs in Environmental Education for Elementary and Secondary Schools (1974-75), was analyzed and those programs and projects which were applicable to the study were identified.

3. A direct-mail request for assistance in identifying appropriate programs and projects for inclusion in the study population was sent to 33 organizations, agencies and persons known to be working in the field of environmental education. More than two-thirds of those contacted responded. (See Appendix II.)

The purpose of this directory is to compile a listing of public school program and project directors/coordinators that can be utilized to facilitate the formation of a national communication and information delivery system among operational programs and projects. In no way, however, does this publication purport to list all existing programs and projects.

The compilation of programs and projects is presented in two sections. Section I lists those programs and projects which responded to the actual survey instrument administered in the research study. Section II contains a listing of those programs and projects which did not respond to the research instrument, but were identified as appropriate programs/and projects for inclusion in the study population. In both sections, all programs and projects are listed by state.
